tube heat exchangers**

Water treatment - equipment and plants

Oy Pumppulohja Ab

is today one of the biggest manufacturers of pressure vessels in Finland. In addition to this our product range comprises pumps and pump aggregates for water supply, industry and equipment manufacturers.

We export our products directly to several EU countries and in cooperation with equipment manufacturers to different parts of the world.

Oy Pumppulohja Ab employs about 60 persons and its turnover is about 7 M euro. The total amount of own production space is 5000 m².

Our special fields of expertise are pressure vessels, tubular heat exchangers and reservoirs for filters as well as welding of acid-proof and stainless steel. When appropriate we design the pressure vessels according to the client's requirements and submit them for approval.

We apply ISO 9001 quality system and our quality system for welding according to EN 729-2 is certified. We are a reliable partner and a versatile, flexible supplier of reservoir products and pumps.

WatMan is one of the leading suppliers of tailor-made water treatment equipment and demanding turnkey plants in Finland, a country that is

famous for its clean nature. Since our establishment in the early 1990s, our primary focus has been to develop, produce and deliver high-quality, innovative water treatment products that will help the customer to gain something extra. Our goal is to help make them more competitive and more successful.

In our view, lower costs can only be achieved by higher performance, and higher performance can be achieved by accurate design work.

We are confident that we can make you more competitive - both in monetary terms and in terms of environmental friendliness.
